

## Homework

Describe the different colors of the picture below by telling me the colors that the object absorbs, but you **CANNOT TELL ME WHAT COLORS THAT IT REFLECTS!** You can also describe colors by telling me what pigments they are made up of (For example, if I were describing my house, I would say the bricks of my house absorb the colors blue and green, and the shudders are a mix of all three primary colors of pigment....so I am telling you that my house is red with black shudders)...you get the idea...now try it on you own.
